

The GEMAS periodic table OF GRAZING LAND SOIL IN EUROPE

Clemens Reimann, Manfred Birke, Karl Fabian, Alecos Demetriades & The GEMAS Project Team

Geochemical Mapping of Agricultural and Grazing land Soil (GEMAS) is a cooperative project between the Geochemistry Expert Group of EuroGeoSurveys and Eurometaux.

During 2008 and until early 2009, a total of 2108 samples of agricultural (ploughed Land, 0-20 cm, Ap-samples) and 2023 samples of grazing land (0-10 cm, Gr

samples) were collected at a density of 1 site/2500 km² each from 33 European countries, covering an area of 5,600,000 km².

All samples were analysed for 52 chemical elements following an aqua regia extraction, 41 elements by XRF (total), and soil properties, like CEC, TOC, pH (CaCl₂), following tight external quality

control procedures. In addition, the Ap soil samples were analysed for 57 elements: a mobile metal ion (MMI⁺) extraction, Pb isotopes and magnetic susceptibility.
